

CLEAN FREEK

**99.999%
kill rate**

**14-day mono-molecular
protection**

**Safe for use on all hard surfaces, rubber, leather & textiles.
Perfect for all sports equipment!**

How Does it work?

Once you have applied the Gear Guard you can wait for it to dry naturally or wipe down a hard surface (after 30-45 seconds). Once applied it will form a covalent bond which allows it to remain affixed to any hard or soft surface. The surface is then positively charged generated by a nitrogen molecule, which pulls in negatively charged microbes.

Our recommendation:

We use the Gear Guard on numerous fabrics, climbing shoes, trainers, innersoles and all hard surfaces. Treat textiles at the end of the day and leave to dry overnight and they should be good by the morning. Hard Surfaces can be sprayed, left for 30-45 seconds and wipe down. Your equipment is then protected with 14 mono-molecular protection!

In addition, we would recommend that you carry out a deep clean every now and again on textiles by treating over 1-2 days,

Product	Price
Gear Guard 300 750ml Spray	£15
Gear Guard 300 5 Litre Refill Container	£99
